

VClub: Code Manager

K Vivek Kumar

v1.0.0

1 Introduction

VClub: Code Manager is a Python application designed to help users manage and organize their code snippets efficiently. It provides a user-friendly interface for adding, editing, and searching code functions. This documentation provides an overview of the application's features and functionality.

2 Features

- **Add Function:** Users can add new code functions by providing tags, comments, arguments, and return type. The code snippet can be entered and saved using the intuitive user interface.
- **Edit Function:** Existing functions can be modified by selecting them from the search list. The user can update the tags, comments, arguments, return type, and code snippet for the selected function.
- **Search Function:** The application allows users to search for code functions based on specific tags or keywords. The search results are displayed in a list for easy reference.
